
150-foot energy storage container for wastewater treatment plants in Tashkent

How long does a containerized wastewater treatment plant take?

We offer a variety of capacities that can meet your requirements. As the pre-assembled containerized wastewater treatment plant is located inside a standard 20 or 40 foot shipping container, it can be relocated and installed with ease at other locations. In most cases it is a one to two-day operation and requires only a flatbed truck and a crane.

When will Tashkent's new wastewater treatment plant be fully operational?

The construction of the project is expected to begin in 2026, with the plant scheduled to become fully operational by 2030. Upon completion, the facility will serve approximately three million people in Tashkent and surrounding cities and replace the two existing wastewater treatment plants in Salar and Bektimir.

How will Tashkent improve sanitary and epidemiological condition?

The project will improve the sanitary and epidemiological condition of the Sergeli, Bektemir and Yangihayot districts of Tashkent and sewerage services for almost 1.5 million residents. More than 500 thousand citizens and 100 enterprises and organizations will have access to centralized sewerage services.

What is containerization of a water treatment plant?

Containers installed on site Containerization of a water treatment plant does not only include the supply of a container, it includes the complete installation of the plant: Cabling and wiring of pumps and instrumentation inside the container to main control cabinet. We can deliver our systems in insulated (20 or 40 ft) containers.
