
Base station communication error

Why is my base station not broadcasting?

The software sets up all radio and receiver operating parameters, and is the most likely route to a successful problem resolution once you have checked all connections, cables, and batteries. The base station is not broadcasting. See Base station is not broadcasting below. Incorrect over-the-air baud rates between base station and rover.

What is a communication base station?

Communication base station setups will usually include a wide array of different technologies, including power supplies, data servers, head end, radio repeaters, and communication systems that allow for high-speed continuous information flow. It can also be used as part of a leaky feeder system in the communication network.

Why is my scs900 radio not receiving data?

If the radio is receiving data (the Radio LED is flashing) and the receiver is not receiving data, check the port settings of the receiver and radio using the Siteworks or SCS900 Site Controller software; match the settings and try again. The radio antenna cable and GPS antenna cable are mixed up.

How do I fix a bad baud rate between base station and Rover?

Incorrect over-the-air baud rates between base station and rover. Connect to the roving receiver's radio and make sure that it has the same setting as the base station receiver. Mismatched channel or network number selection. Match the base station and rover radio channels/network number and try again.
