# How do base stations communicate with BSC

What is a base station controller (BSC) in GSM?

Explain the role of a Base Station Controller (BSC) in GSM. The Base Station Controller (BSC) is a critical component in a GSM (Global System for Mobile Communications) network. It plays a central role in managing multiple Base Transceiver Stations (BTSs) and ensuring the efficient operation of the radio access network.

What is a base transceiver station (BSc)?

The main role of a BSC is to control multiple Base Transceiver Stations (BTS), which handle direct communication with mobile phones. A base transceiver station is a key component in the mobile network infrastructure responsible for transmitting and receiving radio signals between the network and user devices.

What is a BSc in a mobile network?

Definition and Role: A BSC is a critical component in mobile networks that manages one or more Base Transceiver Stations (BTS), also known as base stations or cell sites. Its primary functions include: Radio Network Management: This involves tasks like radio frequency control.
