How much does a battery energy storage system cost?

In 2025, the typical cost of commercial lithium battery energy storage systems, including the battery, battery management system (BMS), inverter (PCS), and installation, ranges from \$280 to \$580 per kWh. Larger systems (100 kWh or more) can cost between \$180 to \$300 per kWh. How does battery chemistry affect the cost of energy storage systems?

How much does it cost to build an energy storage system?

Enel X referred to a recent survey of energy storage systems report that found they typically cost US\$1 million per megawatt to build. "We are purchasing it, we're building it together with subcontractors, and we'll own and operate the system on the behalf, collectively, of Imperial and ourselves," Martin said.
