## Off-grid mobile energy storage container from Liechtenstein for hospitals

How can a mobile energy storage system help a construction site?

Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions.

What is a mobile energy storage system?

On the construction site, there is no grid power, and the mobile energy storage is used for power supply. During a power outage, stored electricity can be used to continue operations without interruptions. Maximum safety utilizing the safe type of LFP battery (LiFePO<sub>4</sub>) combined with an intelligent 3-level battery management system (BMS);

How can a microgrid be used in a construction site?

Solar, storage and diesel generator combined microgrid used in areas without electricity. Integrate solar, storage, and charging stations to provide more green and low-carbon energy. On the construction site, there is no grid power, and the mobile energy storage is used for power supply.

What is the lowest levelized cost of energy for off-grid hospitals?

It was found that the lowest levelized cost of energy (LCOE) for medium and large off-grid hospitals is for a hybrid system that includes RES, BESS, and DG. BESS can be combined with RES in grid-connected hospitals to take advantage of battery incentives and to have a viable investment with a short payback period .
