
One-to-four solar micro inverter

What are solar microinverters?

Microinverters are small electronic devices that convert direct current (DC) into alternating current (AC). One microinverter could fit the palm of your hand. The main factor differentiating microinverters from traditional inverters is that they operate at the panel level rather than the solar panel system as a whole.

How many solar panels can a micro-inverter support?

With a maximum output of 1200W and an operating voltage range of DC18V-50V, this micro-inverter supports two groups of solar panel modules. Its MPPT technology boasts an impressive energy conversion efficiency of up to 99.5%, maximizing your system's performance.

How to choose a solar energy micro-inverter?

By prioritizing these features, you'll guarantee a smoother, more efficient solar energy system integration and operation. Along with installation ease and maintenance, monitoring and connectivity features play an essential role in choosing the right solar energy micro-inverter.
