What is an RV power inverter?

At their core, power inverters are devices that convert DC (Direct Current) from your RV battery into AC (Alternating Current), the standard form of power for most household appliances.

Typically, RV batteries operate on 12V or 24V DC, whereas home appliances require 110V or 220V AC, depending on your location.

Can a battery inverter run an RV?

Battery Inverters are designed to simply change DC power to AC so that you can run typical household appliances in your RV. Renogy's line of battery inverters can handle loads up to 700W, 1000W, 2000W, and 3000W, respectively. As the capacity increases, so does the price, and the amount of power the inverter requires to run itself.
