Can rooftop solar power your air conditioning system?

More U.S. homes now hit their annual cooling-cost peak on the same hot, sunny afternoons when rooftop solar cranks out maximum power. Pairing those curves allows a small PV array to shoulder 30-50% of your air conditioning system load on the very first day. What does that mean for you?

Can solar duct heat a rooftop HVAC system?

The SolarDuct heating array can heat incoming fresh air up to 40°F above ambient temperatures. In the summer, when solar-heated air is not desired, the SolarDuct system is bypassed and the rooftop HVAC units will draw direct from ambient.

What is a solar-powered air conditioner?

Photovoltaic (PV) panels are central to these systems, as they convert sunlight into electrical energy. When it comes to cooling, solar-powered air conditioners come in different types, but all aim to maximize energy savings and reduce greenhouse gas emissions.

What is a rooftop solar heating system?

A rooftop solar heating system, such as SolarDuct, is a solution that helps with Zero-Carbon or Net-Zero Energy Building targets. The modular SolarDuct units are arranged and assembled similar to traditional PV solar panels, and the resulting SolarDuct arrays integrate seamlessly with existing rooftop mechanical equipment.
